

PROFESSIONAL TRAINING PROGRAM

Data Analytics & Business Intelligence

Turn data into business decisions. Master industry-standard tools through a 4-month intensive program designed to prepare you for high-demand analytics careers.

4 Months

Live Online Classes

Hands-on Projects

Placement Support

No Coding Prerequisites

OVERVIEW

Program at a Glance

DURATION 4 Months (16 Weeks)	MODE Live Online (Google Meet)
BATCHES Daily Live Classes	PREREQUISITES None Required

Who Can Join: College students, fresh graduates, working professionals, BBA/BCA/B.Com/B.Sc./MBA students, career switchers, entrepreneurs, and business owners. Anyone interested in data-driven decision making is welcome. **No prior coding experience required.**

This program features live instructor-led sessions, hands-on practical training, and a curriculum designed around real-world business scenarios. Every module includes exercises, case studies, and projects that mirror what you will encounter on the job.

CURRICULUM

What You'll Learn — Modules 1 to 4

MODULE 01 Excel for Data Analytics Build a strong foundation in the most widely used analytics tool. Learn to organize, analyze, and visualize data efficiently. • Excel Fundamentals & Data Formatting • Advanced Functions & Complex Formulas • Pivot Tables & Pivot Charts • Lookup Functions (VLOOKUP, XLOOKUP, INDEX-MATCH) • Interactive Dashboards & Data Validation • Conditional Formatting for Insights	MODULE 02 SQL for Data Analysis Master the language of databases. Query, filter, and aggregate data to extract meaningful business insights from relational databases. • Database Concepts & SQL Query Writing • Joins, Filtering & Sorting Data • Aggregate Functions & GROUP BY / HAVING • Subqueries & Window Functions • Common Table Expressions (CTEs) • Real Business Case Studies	MODULE 03 Python for Data Analytics Learn Python programming from scratch and apply it to real data analysis workflows using industry-standard libraries. • Python Basics: Variables, Loops & Functions • NumPy for Numerical Computing • Pandas for Data Manipulation • Data Cleaning & Transformation • Exploratory Data Analysis (EDA) • Working with CSV & Excel Files	MODULE 04 Statistics for Analytics Develop the statistical thinking needed to interpret data correctly, validate findings, and make evidence-based decisions. • Descriptive Statistics & Probability Basics • Measures of Central Tendency & Spread • Dispersion, Skewness & Correlation • Data Distribution (Normal, Binomial, etc.) • Hypothesis Testing Fundamentals
--	--	---	--

What You'll Learn — Modules 5 to 7

MODULE 05

Data Visualization

Create compelling visual narratives that communicate insights clearly to stakeholders and drive action.

- Matplotlib & Plotly
- Interactive Charts & Graphs
- Business Report Design
- Storytelling with Data
- KPI Dashboard Creation

MODULE 06

Power BI

Become proficient in Microsoft's leading BI platform, from data modeling to publishing interactive reports.

- Power BI Desktop & Service
- Data Import & Power Query
- Data Modeling & Relationships
- DAX: Measures & Calculated Columns
- Interactive Dashboards
- Report Publishing & Sharing

MODULE 07

Business Intelligence

Apply analytical skills to real business domains and learn to design solutions that impact decision-making.

- BI Concepts & KPI Design
- Business Reporting
- Executive Dashboards
- Sales & Financial Analytics
- HR & Marketing Analytics
- Customer Analytics

TOOLKIT

Tools You'll Master

Microsoft Excel

SQL / MySQL

Python

Pandas

NumPy

Matplotlib

Plotly

Power BI

Power Query

DAX

Git & GitHub

PROJECTS

Hands-on Projects

Work on 10 industry-relevant projects that simulate real-world analytics challenges across multiple business domains, giving you portfolio-ready deliverables.

• Sales Performance Dashboard

Track KPIs, revenue trends, and regional performance with interactive Power BI dashboards.

• Retail Store Analysis

Analyze sales patterns, inventory turnover, and customer purchasing behavior using SQL and Excel.

• HR Analytics Dashboard

Visualize attrition rates, hiring funnels, and employee performance metrics.

• Customer Segmentation

Apply clustering techniques to segment customers and tailor marketing strategies.

• Financial Performance

Build dashboards for P&L analysis, cash flow tracking, and budget variance reporting.

• Marketing Campaign Analysis

Measure campaign ROI, conversion funnels, and channel effectiveness with data-driven insights.

• E-commerce Sales Dashboard

Analyze product performance, cart abandonment, and revenue optimization opportunities.

• Supply Chain Analytics

Optimize logistics, forecast demand, and identify bottlenecks in the supply chain.

• IPL Data Analysis

Explore match statistics, player performance, and team strategies using Python and Pandas.

• Netflix Data Analysis

Analyze content catalogs, viewing trends, and recommendation patterns from real-world datasets.

Including 4+ industry-level projects

Build a Complete BI Solution

End-to-End Business Intelligence Capstone

As the culminating experience of this program, you will build a complete Business Intelligence solution from scratch. This project integrates every tool and skill learned across all seven modules, demonstrating your ability to handle a full analytics workflow independently. You will collect raw data from real-world sources, clean and prepare it using Python and SQL, perform in-depth analysis, and create an interactive dashboard in Power BI that presents actionable business insights. The final deliverable includes a professional presentation of your findings, simulating a real stakeholder walkthrough.

Roles You Can Apply For

Data Analyst

BI Analyst

MIS Executive

Reporting Analyst

Operations Analyst

Business Analyst

Financial Analyst

Marketing Analyst

Product Analyst

Junior Data Consultant

HIGHLIGHTS

Why Choose KodeToCareer?

- 100% Practical Learning
- Industry-Based Projects
- Small Batch Size
- Lifetime Learning Resources
- Industry-Recognized Certificate
- Live Instructor-Led Classes
- Real Business Case Studies
- Recorded Sessions Available
- Dedicated Doubt Clearing
- Career Guidance & Placement

Upon successful completion, learners receive a **KodeToCareer Certificate in Data Analytics & Business Intelligence**, validating practical skills and project experience recognized by industry employers.

Start your journey toward becoming a job-ready
Data Analytics & BI professional in just 4 months!
