WHY JAVA FULL STACK?

Why Learn Java Full Stack Development?

Java powers millions of enterprise applications worldwide, from banking systems and e-commerce platforms to healthcare solutions and government services. Companies across industries continue to invest heavily in Java-based technologies because of its unmatched scalability, rock-solid reliability, and proven long-term demand in the job market. Learning Java Full Stack Development opens doors to a versatile career where you can work on both server-side logic and user-facing interfaces.

A Java Full Stack Developer is uniquely valuable because they understand the entire application lifecycle, from designing database schemas and building RESTful APIs to crafting responsive frontends with React. This comprehensive skill set makes you an asset to any development team and significantly increases your employability across startups, mid-size companies, and large enterprises.

Career Opportunities

- Java Developer
- Software Engineer
- Backend Developer
- Frontend Developer
- Full Stack Developer
- API Developer

WHY KODETOCAREER?

Your Launchpad to a Tech Career

KodetoCareer combines live instruction with real-world project experience. Our curriculum is designed with industry professionals to ensure every concept maps directly to what employers need. From day one, you write code, build applications, and develop the problem-solving mindset that hiring managers seek.

C Industry-Oriented Curriculum	L Live Interactive Classes	H Hands-On Coding	15+ Real-World Projects
D Daily Coding Practice	M Career Mentorship	R Resume Building	G GitHub Portfolio
LI LinkedIn Optimization	MI Mock Interviews	P Placement Assistance	RC Recorded Sessions

CURRICULUM

Complete Course Roadmap

A structured 5-month journey from programming fundamentals to full stack deployment and career readiness.

1

MONTH 1

Programming Fundamentals

Java Basics • Variables & Loops • Arrays & Methods • OOP Concepts • Collections • Exception Handling • File Handling • Mini Project

2

MONTH 2

Advanced Java & Databases

JDBC • Servlets & JSP • MVC Pattern • MySQL • SQL Queries • CRUD Operations • Authentication • Database Design • Mini Project

3

MONTH 3

Spring Boot & APIs

Spring Framework • Dependency Injection • REST APIs • Hibernate & JPA • Spring Security • JWT • Swagger & Postman

4

MONTH 4

Frontend Development

HTML5 & CSS3 • Bootstrap • JavaScript & ES6 • React Components & Hooks • React Router • Axios • Responsive Design

5

MONTH 5

Full Stack Integration

Auth & RBAC • Git & GitHub • Docker & Deploy • AWS & Render • CI/CD • Performance • Capstone Project • Resume & LinkedIn
