

6-MONTH INDUSTRY-ORIENTED CURRICULUM

MERN Stack Development + AI Integration

Master modern web development and build AI-powered applications through hands-on learning, real-world projects, mentor-led practice, portfolio development, and career preparation.

ai-server.js

```
const assistant = await openai.responses.create({  
  model: 'reasoning-model',  
  input: userQuestion,  
  tools: ['retrieval', 'code'],  
});  
return buildAppFeature(assistant.output);
```

What You'll Become

- Full Stack Developer
- React Developer
- Node.js Backend Developer
- MERN Stack Engineer
- AI Application Developer
- Software Engineer

Program Highlights

- Live classes and lifetime recorded sessions
- Dedicated doubt support and mentorship
- Portfolio development with code reviews
- Resume building, mock interviews and referrals
- Internship opportunities and placement assistance

Online | Offline | Hybrid - Beginner friendly - Build, deploy and present production-ready projects

Who We Are

A premium, career-focused technology academy for ambitious students who want to become industry-ready software professionals.

KodeToCareer

We bridge the gap between traditional education and modern employment through practical development, complex problem-solving, agile teamwork, real-world project experience, personalized mentorship and career guidance.

Our Mission

Empower students with future-ready technical skills so they can secure high-paying jobs, capture freelance opportunities, or launch tech startups.

Our Vision

Become India's most trusted and results-driven career acceleration platform for software development and artificial intelligence.

Project-Based Learning

Build while you learn.

Personalized Mentorship

Guidance from industry experts.

Small Batch Size

Focused attention for every student.

AI Integrated Training

Stay ahead of the automation curve.

Lifetime Community

A network that grows with you.

WHY MERN STACK?

The Backbone Of The Modern Web

MongoDB, Express.js, React.js and Node.js power fast, scalable and responsive digital products across startups, agencies and global technology teams.

TECH GIANTS POWERED BY MERN AND JAVASCRIPT

Netflix

Uber

Airbnb

PayPal

Walmart

Meta

Amazon

Microsoft

LinkedIn

Adobe

Career Benefits

High demand: continuous shortage of skilled talent.

Excellent salaries: premium pay for full-stack skills.

Remote flexibility: work from anywhere in the world.

Freelance potential: high-paying client projects.

Startup ready: build an entire product independently.

Technical Benefits

JavaScript everywhere: one language for front end and back end.

Fast development: rapid prototyping and deployment.

Highly scalable: handles massive traffic efficiently.

Massive community: unmatched open-source support.

AI ready: perfect for API integrations and automation.

Six Months Of Guided Momentum

A practical learning system that explains the why, demonstrates the how and gives students repeated chances to build with feedback.

6 Months

Industry-oriented curriculum

Hybrid

Online, offline or blended batches

Weekly

Assessments and code reviews

Career

Workshops and interview prep

Learning Methodology

- Live instructor-led classes
- Hands-on coding and daily assignments
- Weekly technical assessments and code reviews
- Hackathons and collaborative projects
- Career workshops and interview preparation

Your Daily Learning Flow

- Concept explanation
- Practical demonstration
- Coding practice
- Assignment solving
- Project integration
- Doubt resolution

Frontend Foundations

Students begin with core mental models, browser tools, semantic markup, responsive layouts and UI fundamentals.

Programming Fundamentals

- Programming logic
- How websites and the internet work
- Client-server architecture
- VS Code, Git and GitHub setup
- Command line and developer tools
- Browser debugging techniques

HTML5 And CSS3 Mastery

- Semantic HTML structure
- Advanced forms and validations
- Tables, audio, video and media handling
- SEO basics and accessibility standards
- Flexbox, CSS Grid and specificity
- Animations, responsive design and UI principles

Foundation Outcomes

Students learn to reason about the web platform, create accessible pages, build responsive layouts and present clean professional interfaces.

JavaScript Mastery

The JavaScript module moves from core language concepts to asynchronous programming, API calls and reliable error handling.

Core JavaScript

- Variables, scopes and hoisting
- Functions, callbacks and arrow functions
- Objects, arrays and advanced methods
- DOM manipulation and event listeners
- Object-oriented JavaScript

Advanced And Async JavaScript

- Event loop and asynchronous JavaScript
- Promises and async/await
- Fetch API and HTTP requests
- Destructuring, spread and rest operators
- Modules, closures and custom errors

Module 2 Mini-Projects

Interactive Calculator, Real-time Weather App, Dynamic Quiz App, Personal Portfolio, Expense Tracker and Drag-and-Drop To-Do App.

Frontend Mastery With React

Students learn component-driven interfaces, state management, API integration, performance optimization and deployment.

React Fundamentals

- Virtual DOM fundamentals
- JSX syntax and component architecture
- Props and state management
- Hooks: useState, useEffect, useRef and useMemo
- Client-side routing with React Router DOM

Advanced React

- Complex forms and custom validations
- External API integration and data fetching
- Context API and Redux Toolkit
- Performance optimization techniques
- Authentication flows and deployment

React Mega Projects

Netflix UI Clone, Spotify Web Player Clone, Analytics Dashboard, E-Commerce Storefront, Hospital Management Frontend and LMS.

Node.js And Express

The backend track teaches students to design APIs, handle auth, manage files, structure middleware and build secure server logic.

Node.js Foundations

- Node architecture and the V8 engine
- Core modules and file system
- NPM and package management
- Server-side JavaScript patterns
- Environment configuration and structure

Express, Security And APIs

- Express server setup
- Routing and HTTP methods
- Custom middleware and error handling
- Authentication, authorization and JWT
- Role-based access, uploads and email integration

Backend Projects

Secure Authentication System, Real-time Inventory API, Student Portal Backend, CRM Architecture and Hospital Management API.

MongoDB For Real Products

Students learn database fundamentals, data modeling, indexing, cloud setup, security and production API integration.

Database Fundamentals

- NoSQL vs SQL concepts
- Collections, documents and BSON
- Advanced CRUD operations
- Aggregation pipeline
- MongoDB Atlas cloud setup

Advanced Data Modeling

- Schema relationships: 1:1, 1:N and N:M
- Indexes for query optimization
- Database security and roles
- Automated backups
- Connecting Node, Express and MongoDB

Complete Backend Systems

Students build engines for authentication, product catalogs, order processing, payment gateways, notification systems and reports.

The Game Changer

Stand out by learning how to integrate modern AI capabilities into web applications with reliable prompts, APIs, retrieval and automation.

ai-server.js

```
const assistant = await openai.responses.create({  
  model: 'reasoning-model',  
  input: userQuestion,  
  tools: ['retrieval', 'code'],  
});  
  
return buildAppFeature(assistant.output);
```

AI APIs And Prompt Engineering

- OpenAI, Google Gemini and Claude APIs
- Prompt engineering for reliable outputs
- Image generation and voice AI APIs
- Speech-to-text and text-to-speech implementation
- Document AI and OCR workflows

Advanced AI Concepts

Vector databases, embeddings, RAG applications, autonomous AI agents, recommendation systems and semantic search.

AI Capstone Projects

Customer Support Chatbot, AI Resume Generator, Virtual Interview Assistant, Automated Blog Generator, Code Debugging Assistant and Healthcare Triage Bot.

From Localhost To The Real World

Students learn the delivery practices required to ship working applications and manage modern deployment infrastructure.

Version Control

Git, GitHub, branching strategies, merges and pull requests.

CI/CD Basics

Continuous integration and deployment fundamentals.

Frontend Hosting

Deploy React applications on Vercel and Netlify.

Backend Hosting

Run Node APIs on Render, Railway and Heroku-style platforms.

Database Hosting

MongoDB Atlas setup, security, users and automated backups.

Infrastructure

Custom domains, SSL, environment variables and cloud architecture.

Build Production-Ready Applications

Graduates finish with a portfolio of functional full-stack applications that demonstrate product thinking and deployment readiness.

Hospital Management

Patient portals, doctor scheduling and billing.

Learning Management

Course hosting, video streaming and quizzes.

AI Chat Application

Real-time messaging with AI translation and assistance.

Food Delivery Platform

Multi-vendor system with cart and payment integration.

E-Commerce Website

Digital storefront with admin dashboard.

Job Portal

Resume parsing, employer dashboards and application tracking.

Social Media Platform

Posts, likes, comments and real-time notifications.

Hotel Booking

Availability calendars and booking logic.

Beyond Coding: Getting You Hired

The program includes the professional polish students need for interview performance and employer-ready portfolios.

Professional Branding

ATS-friendly resume, LinkedIn optimization and a visible GitHub profile.

Portfolio Website

A custom, fast personal portfolio that presents projects clearly.

Mock Interviews

Practice for technical, HR and behavioral rounds.

Aptitude And Communication

Soft skills training, logical reasoning and confidence-building.

Technical Deep-Dive

Live coding tests, whiteboarding and system design basics.

Your Success Is Our Success

The Career Success Team bridges the gap between new skills and top tech companies through review, counseling, referrals and hiring support.

CAREER SUCCESS SUPPORT

- 1 Detailed resume and portfolio review
- 2 Direct company referrals and hiring drives
- 3 Interview scheduling and logistics
- 4 1-on-1 career counseling
- 5 Exclusive internship opportunities
- 6 End-to-end placement support
- 7 Salary negotiation tactics
- 8 Freelancing and remote job sourcing guidance

Where Can This Course Take You?

Successful students are prepared for high-growth roles across product teams, agencies, startups, freelance work and remote engineering.

Full Stack Developer

Builds complete web products across the user interface, server, database and deployment.

Frontend Developer

Creates fast, responsive screens and user experiences using React, HTML, CSS and JavaScript.

Backend Developer

Builds secure APIs, business logic, authentication and database services using Node.js.

Software Engineer

Designs, develops, tests and maintains reliable software solutions for real business needs.

MERN Stack Developer

Builds modern applications with MongoDB, Express, React and Node.js from end to end.

React / Node.js Developer

Specializes in React interfaces or Node.js server-side applications and APIs.

AI Application Developer

Adds AI features such as chatbots, content tools and smart workflows to web applications.

Technical Consultant

Helps clients choose, plan and implement technology solutions that solve business problems.

Freelance / Remote Developer

Delivers web projects independently for clients or collaborates with distributed global teams.

Startup Founder

Builds and launches a product idea, from prototype and technology choices to growth.

Growth Potential In Tech

The technology industry can offer strong starting salaries and significant growth as students gain project depth, interview skill and experience.

Experience Level	Estimated Salary Range (India)
Freshers / Entry-Level	Rs. 4 LPA - Rs. 8 LPA
Skilled Developers (1-3 Yrs)	Rs. 8 LPA - Rs. 15 LPA
Product-Based Companies	Rs. 15 LPA+
Remote International Jobs	Uncapped earning potential in USD/EUR

Note

Salaries vary based on individual performance, location, employer, soft skills, interview readiness, project quality and current market conditions.

WHO CAN JOIN?

Designed For Ambition

No prior coding experience is required. The program starts from fundamentals and builds progressively toward advanced full-stack and AI application development.

School Graduates

School graduates and college students.

Degree Students

BCA, B.Tech and MCA students.

Career Switchers

Non-IT professionals switching careers.

IT Upskillers

Existing IT workers moving to modern stacks.

Freelancers

Freelancers offering premium full-stack services.

Entrepreneurs

Founders building their own tech products.

COURSE BENEFITS SUMMARY

Everything You Need To Succeed

One program combining technical depth, applied projects, mentorship, career support and future-facing AI skills.

PROGRAM ADVANTAGES

- + 100% industry-aligned curriculum
- + Intensive live coding sessions
- + 15+ hands-on projects and capstones
- + Internship and placement support
- + Rigorous interview preparation
- + Groundbreaking AI integrated development
- + Lifetime community and alumni access
- + Verifiable course certificates
- + Comprehensive soft skills training
- + Continuous 1-on-1 mentorship

Start Your Journey Today

MERN Stack Development + AI Integration

Program Deliverables

6-month program, online/offline/hybrid access, 15+ industry projects, placement assistance, internship opportunities and a verifiable certificate.

Enrollment Fee

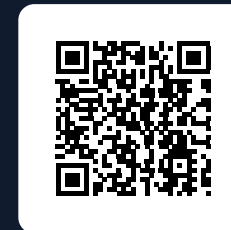

Rs. 6,000 initial enrollment fee.

After Placement

Rs. 4,000 under the Job Guarantee Track, subject to terms and eligibility.
